Project Overview

User Story

1. User Story

> *As a member of the IT procurement team, I want a streamlined process for ordering standard laptops so that tasks are automatically generated and assigned to the hardware team for configuration. This will ensure that laptops are promptly configured upon arrival, reducing user wait times and minimising manual intervention.*

2. Story Breakdown

Element	Description
Who (role)	A member of the IT procurement team.
What (need)	A streamlined process for ordering standard laptops in which tasks are automatically generated and assigned to the hardware team for configuration.
Why (benefit)	Laptops are promptly configured upon arrival, user wait times are reduced and manual intervention is minimised.

3. Acceptance Criteria

1. A user can order the **Standard Laptop** from the Service Catalog under the Hardware category.
2. When the request is approved, a Catalog Task is created automatically without manual action.
3. The Catalog Task carries the short description *Laptop needs to Configured* and a matching description.
4. The Catalog Task is assigned to the **Hardware** group.
5. The Catalog Task is linked to the correct Requested Item and is visible under its Catalog Tasks tab.
6. The flow is active and attached to the Standard Laptop catalog item.

4. Scenario

Step	Description
Given	The Standard Laptop task flow is active and assigned to the Standard Laptop catalog item.

Step	Description
When	A user orders a Standard Laptop and the approver approves the request.
Then	A Catalog Task is generated automatically and assigned to the Hardware group with the short description Laptop needs to Configured.

5. Benefits to Stakeholders

Stakeholder	Benefit
IT procurement team	No manual task creation or follow-up for standard laptop orders.
Hardware team	Receives a clearly described task, assigned to the team, as soon as the request is approved.
End users	Shorter wait for a configured laptop.

6. Assumptions and Dependencies

- The Standard Laptop catalog item exists in the Service Catalog under the Hardware category.
- A Hardware assignment group is available in the instance.
- An approver is available to approve the request.
- The flow is created, activated and attached to the catalog item before orders are placed.

7. End-to-End Story Flow

1. The user opens the Service Catalog, selects Hardware and chooses the Standard Laptop.
2. The user clicks Order Now, and a request and requested item are created.
3. The approver approves the request from the Approvers tab.
4. The flow runs and creates a Catalog Task for the requested item.
5. The task appears under the Catalog Tasks tab of the requested item, assigned to the Hardware group.
6. The Hardware team picks up the task and configures the laptop.

8. Definition of Done

- The flow is saved and activated.
- The flow is attached to the Standard Laptop catalog item.
- A test order results in a Catalog Task with the expected short description and assignment group.
- No manual step was needed to create or assign the task.

9. Quality Expectations

- **Consistency:** every approved order produces a task in the same format.
- **Simplicity:** the process is built in Flow Designer without custom scripting.
- **Visibility:** the task can be found from the requested item, so progress is easy to follow.
